

FMCW Radar Level Transmitter

PRODUCT INTRODUCTION

FMCW Radar level transmitter is a non contact measuring device, which is suitable for high temp., high pressure, and corrosive applications. It is easy to install and free of maintenance, especially for the high accuracy requirement environment.

PRINCIPLE

FMCW radar adopts a high frequency signal, which is emitted via an antenna and swipes frequency increment by 0.5GHz during the measurement, reflected by the target surface and received at a time delay. The frequency difference, which is calculated from the transmitting frequency and the received frequency, which is directly proportional to the measured distance (or material surface).

The frequency difference then is processed by Fast Fourier Transformation (FFT) to identify the signal in Intermedium Frequency (IF). This FMCW radar is innate with signal / noise enhancement and filtering of echo-back via Phase-Lock Loop (PLL) circuit that is the best solution for complex environment and high accuracy measurement.

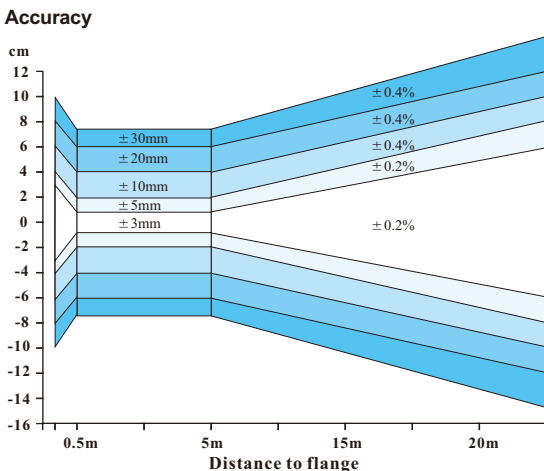

Design formula

$$\text{Slop} = \frac{F}{T_m} = \frac{f_R}{t_r} = \frac{f_R}{\frac{2R}{c}} \quad t_r = \frac{2R}{c}$$

$$R = \frac{F_R \times c \times T_m}{2F}$$

3"	$L \leq 200$
4"	$L \leq 300$
5"	$L \leq 400$

3. JFR-22X and JFR-23X can be hidden in the extension tube, the recommendation of the tube diameter D and length L are shown in the table.

Model	Diameter D (Inch)	Length L (Inch)
JFR-22X	$D > 100$	$L \leq 150$

Diameter D (Inch)	Length L (Inch)
2"	$L \leq 100$
4"	$L \leq 200$
5"	$L \leq 300$
6"	$L \leq 400$

5. Installation recommendations are as follows :
- (1) Antenna installation angle to be perpendicular to the Horizontal.
 - (2) JFR installation position with the drum wall suggestions Are as follows :
Installation location A should be less than $1/6D$
Range with A relation is as follows :
a. $H < 10m$, $A > 300mm$
b. $10m < H < 20m$, $A > 600mm$
c. $H > 20m$, $A > 900mm$

- (3) Extended tube is suggested to do the welding process from outside; welding process from inside, the bulges might affect the signal transmission. The joint part of extended tube cannot be less than "D".

2. Radar installation should not be too close to the drum wall, avoid the drum wall attachment material reflection interference.

3. Radar installation not too close to the drum bracket to avoid reflection is incorrect

4. When obstructions inside the tank, tank be fitted with effectors, steer clear of the error echo reflected to the receiver, causing radar miscalculation.

5. Outdoor installation should take shade or rain-proof measures.

6. If drum internal agitator will have a strong vortex and foam, drum must increase waveguide, the upper waveguide drill vent holes to ensure the correctness of the measured value.

7. Installation should be avoided in the feed inlet position, avoid material interference or obstacles interference.

8. Installation should be avoided in the top center of the arch or round barrel will cause multiple echo reflections.
